

Brachial Plexus Injury in Infants (Erb's Palsy)

At Kids Physiotherapy we work with babies and young children with Brachial Plexus Injuries / Erb's Palsy. We will help monitor your child's condition and liaise back with referring Orthopaedic Specialists, Paediatricians and Brachial Plexus Injury Organisations at local hospitals.

Our physiotherapists will provide you with:

- » *Exercises to improve range of motion and prevent restriction of movement*
- » *Exercises to improve tactile and proprioceptive input*
- » *Exercises to strengthen your child*
- » *Strategies to avoid injury to the affected such as handling and swaddling.*

If understand the care of young ones with a Brachial Plexus Injury often involves a team approach also with Occupational Therapists to prepare splints etc. We will happily work with other professionals to achieve optimal movement and function for your child.
